```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinjoinhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

New isolated human uridine kinase treating hematopoietic neoplastic

family polypeptide 57658, useful for disorders and disorders of neurons,

heart

and

blood vessels

Claim ٠. Fig la; 103pp; English.

CC 57658 and polynucleotides encoding such proteins. 57658 DNAs and proteins CC are useful for developing diagnostic and therapeutic agents for 57658-cc mediated or related disorders such as haematopoletic neoplastic disorders (e.g. leukaemia), haematopoletic disorders (e.g. psoriasis, dermatitis, diabetes mellitus, rheumatoid arthritis, disorders of bone (e.g. rickets, CC diabetes mellitus, rheumatoid arthritis, disorders of bone (e.g. rickets, CC (e.g. hypertension, atheroselerosis) and neurons (e.g. Huntington's CC (e.g. hypertension, atheroselerosis) and neurons (e.g. Huntington's CC their antibodies are useful in screening assays, detection assays (e.g. CC trensic biology) and predictive medicine (e.g. diagnostic assays (e.g. CC prognostic assays, and monitoring clinical trials and pharmacogenomics). CT They are useful as reagents for diagnosing and treating 57658-mediated CC disorders. 57658 DNAs are useful in gene therapy, in chromosome mapping, to identify an individual from a minute biological sample (tissue typing) and to aid in forensic identification of the biological sample. The present sequence is a DNA encoding human 57658 protein. The patent 57658 and p are useful discloses human uridine kinase-like polypeptides, solynucleotides encoding such proteins. 57658 DNAs designated

```
CC comprises: (a) an oligo-dT primer and an oligonucleotide complementary trand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the complementary strand of a polynucleotides; or (b) a combination of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the comprises a polynucleotide which comprises a 5' end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 5' end sequence, where the colynucleotide which comprises a 3'-end sequence, where the complementary to a polynucleotide comprises a 3'-end sequence, where the component of the 5'-end sequence's end sequence is selected from those defined in the specification. The primers sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH3628 and CC AAH3633 to AAH36742 represent human cDNA sequences; AAA92446 to CR AAB93893 represent human cDNA sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁

Novel human uridine kinase polypeptides useful for treating cancers, and to identify agonists and antagonists of the polypeptide useful f treating conditions associated with uridine kinase imbalance -

2001-626259/72

Claim 5; Page 22-23; 31pp; English.

CC polypeptides and polymuclectides and methods for producing such are methods for utilising uridine kinase polypeptides and polymuclectides of are methods for utilising uridine kinase polypeptides and polymuclectides of in diagnostic assays. The polymuclectides and polypeptides of the cinvention may be used as diagnostic reagents by detecting mutations in an associated gene. An array of oligonuclectide probes comprising the constructed to conduct efficient screening of genetic mutations, for cexample. Detection of abnormally decreased or increased levels of controlled or mRNA expression may also be used for diagnosing or determining susceptibility of a subject to a disease of the invention. CC The polymuclectide sequences of the invention can be used for chromosome consistent on a tragments thereof may be used for chromosome contibilities and tissue expression studies. The polypeptides of the invention or fragments thereof may be used as immunogens to produce antibodies. These antibodies may be employed to isolate or identify confit the invention can be used as a vaccine or in gene therapy to treat confit the invention can be used as a vaccine or in gene therapy to treat confit the invention can be used as a vaccine or in gene therapy to treat confit the invention can be used as a vaccine or in gene therapy to treat confit the invention as human ovarian cancer, human colon carcinomas, and colon carcinomas, and colon carcinomas, and colon carcinomas, and colon carcinomas and The invention relates to newly identified human uridine kinase

                                                                                                                                   CC The invention relates to human nucleic acids (AAI57798-AAI61369) and CC the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful CC in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervopathy and CC localised neuropathies and central nervous system diseases, such as CC alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the cutilisation of the activities such as: Immune system suppression, CC activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and inflammation, leukaemias and CC.N.S disorders.
                                                                            Query Match

               The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of
                                                                                                                                                                                                                 Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the
                                                                                                                                                                                                                                                                                                                                                                          Ota T,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination CC of an oligonucleotide comprising a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end CC sequence and an oligonucleotide comprising a sequence complementary to a CC polynucleotide which comprises at 1-end sequence, where the CC oligonucleotide comprises at least 15 nucleotides and the combination of CC the 5'-end sequence/3'-end sequence is selected from those defined in CC the specification. The primer sets can be used in antisense therapy and CC in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the CC particularly full-length cDNAs. The primers are also useful for the CC the full-length cDNAs. The primers allow obtaining of the full-length CC the full-length cDNAs. The primers allow obtaining of the full-length CC AMB13633 to AMH13672 represent human cDNA sequences; AMB92446 to AMH13633 to AMH13632 represent human cDNA sequences; AMB92446 to AMH13632 crepresent oligonucleotides, all of which are used in the exemplification CC of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            멼
                                                     The nucleic acids, proteins, antibodies and (ant)agonists are useful.

C in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast

C and ovarian cancer and other cancers of the adrenal gland, bone, bone

marrow, breast, gastrointestinal tract, liver, lung, or urogenital;

C (b) immune disorders e.g. Addison's disease, allergies, autoimmune

C haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's

C disease, multiple sclerosis, rheumatoid arthritis and ulcerative

C (colitis; (c) cardiovascular disorders such as myocardial ischaemias;

C (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and

C epilepsy; and (f) infectious diseases such as viral, bacterial, fungal

C and parasitic infections.

C Note: The sequence data for this patent did not form part of the

printed specification, but was obtained in electronic format directly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 4; SEQ ID NO 324; 2081pp + Sequence Listing; English.

                                                                                                                                                                                                                                                                                                                                                                                  CC The present invention relates to the isolation of novel human collectules for disease detection and treatment (MDDT), and the polymuclectide sequences (mddt) encoding them. The MDDT polypeptides cC may be used to screen for molecules that bind to, or are bound by the cell type. Probes comprising at least 20 nucleotides of the mddt cpolymucleotide may be used to assess the toxicity of a test compound. CC The MDDT polypeptides and mddt polymucleotides are useful in the cdiagnosis, study, prevention and treatment of diseases associated with cc disorders include cell proliferative disorders (e.g. arteriosclerosis, cirrhosis, or cancers), and autoimmune/inflammatory disorders (e.g. asthma, Crohn's disease, or multiple sclerosis). The mddt cC polymucleotides may also be used as molecule markers, in microarrays, cc and in somatic or germline gene therapy. ABS51814 encode cc the MDDT proteins of the invention.
                                                                                                                                                                                                                                                                                                    Best Loc

                                                                                                                                                                                                                                                          organs before transplantation or for supporting cell culture of primary tissues; induces tissue of mesodermal origin to differentiate in early embryos; increases or decreases the differentiation or proliferation of embryonic stem cells, besides, hematopoietic lineage; modulates colour, stem, percentage of adipose tissue, pigmentation, size, and shape (e.g., cosmetic surgery); modulates mammal's metal state or physical state by influencing biorhythms, caricadic rhythms, depression, tendency for violence, tolerance for pain, reproductive capabilities, hormonal or endocrine levels, appetite, libido, memory, or stress; increases or decreases storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors or other nutritional components. This sequence encodes a novel human musculoskeleral exarem and components.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   neuronal damage occurring in certain disorders or neurodegenerative conditions, such as, Alzheimer's disease, Parkinson's disease, and AIDS-related complex; stimulates chondrocyte growth, thus they can be used to enhance bone and periodontal regeneration and aid in tissue transports or bone grafts; prevents skin aging due to sunburn by stimulating keratinocyte growth; prevents hair loss, since FGF family members activate hair-forming cells and promotes melanocyte growth; stimulates growth and differentiation of hematopoietic cells and bone marrow cells when used in combination with other cytokines; maintains
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention describes an isolated nucleic acid molecule comprising a sequence encoding musculoskeletal system associated polypeptides useful for detecting disorders, e.g., cancer or cancer metastases, in animals or humans. The nucleic acid: stimulates re-vascularisation of ischaemic tissues associated with conditions such as thrombosis, arteriosclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and other cardiovascular conditions; treats wounds due to injuries, burns, post-operative tissue repair, and ulcers; stimulates angiogenesis
                                                                                                                                       Sequence 9732 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure; SEQ ID NO 2804; 321pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Isolated nucleic acid molecules encoding musculoskeletal system associated polypeptides, useful for detecting disorders, e.g. cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2003-128199/12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Rosen CA, Ruben SM,

                                                                                                                                                                                  The invention relates to novel genes (AAL34669-AAL37666) and proteins (C (ARB03087-ARB04109) associated with the musculoskeletal system useful CC for preventing, treating or ameliorating medical conditions e.g. by CC protein or gene therapy. The genes are isolated from a range of human CC antibodies and (ant)agonists are useful in the diagnosis, treatment CC and prevention of: (a) cancer, e.g. breast and ovarian cancer and CC other cancers of the adrenal gland, bone, bone marrow, breast, CC gastrointestinal tract, liver, lung, or urogenital; (b) immune CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; CC (c) cardiovascular disorders such as myocardial ischaemias; (d) wound chealing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and CC parasitic infections.

CC Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly constant published_pct_sequences.

Isolated nucleic acid molecules encoding musculoskeletal system associated polypeptides, useful for detecting disorders, e.g. ca

Disclosure; SEQ ID NO 2805; 321pp; English.

CC conditions, such as, Alzheimer's disease, Parkinson's disease, and CC AIDS-related complex; stimulates chondrovyte growth, thus they can be used to enhance bone and periodontal regeneration and aid in tissue transports or bone grafts; prevents skin aging due to sumburn by stimulating keratinocyte growth; prevents hair loss, since FGF family comembers activate hair-forming cells and promotes melanocyte growth; stimulates growth and differentiation of hematopoietic cells and bone company cells when used in combination with other cytokines; maintains corgans before transplantation or for supporting cell culture of primary ctisques; induces tissue of mesodermal origin to differentiate in early embryos; increases or decreases the differentiation or proliferation of embryonic stem cells, besides, haematopoietic lineage; modulates colour, skin, percentage of adipose tissue, pigmentation, size, and shape (e.g., cosmetic surgery); modulates mammalian characteristics, such as, body height, weight, hair colour, eye colour, skin, percentage of adipose tissue, pigmentation, size, and shape (c.g., cosmetic surgery); modulates mammalian metabolism; changes comammalis metal state or physical state by influencing biorhythms, capabilities, hormonal or endocrine levels, appetite, weight hair colour, experience for pain, reproductive capabilities, hormonal or endocrine levels, appetite, musculoskeletal system antigen.
Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly libido, memory, or stress; increases or decreases storage capabilities fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactor or other nutritional components. This sequence encodes a novel human sequence encoding musculoskeletal system associated polypeptides useful for detecting disorders, e.g., cancer or cancer metastases, in animals or humans. The nucleic acid: stimulates re-vascularisation of ischaemic tissues associated with conditions such as thrombosis, arteriosclerosis. and limb regeneration; stimulates neuronal growth; can treat and prone neuronal damage occurring in certain disorders or neurodegenerative and other cardiovascular conditions; treats wounds due to injuries, The invention describes post-operative tissue repair, and ulcers; stimulates angiogenesis an isolated nucleic acid molecule comprising tolerance for pain, cofactors olour, eye and shape prevent

messenger RNAs that populate a (sub-)transcriptome, where the (sub-)transcriptome comprises messenger RNAs transcribed from multiple transcription units that populate a genome. The library comprises several oligonucleotides, each capable of hybridising selectively to a set of messenger RNAs transcribed from a given transcription unit of the genome, which encodes one or more messenger RNA splice variants. The oligonucleotide libraries are useful for detecting mRNAs from a biological sample, in expression profiling studies, in qualitatively or quantitatively characterising the corresponding transcriptome, and in
                                                                                                                                                                                                                                                                                                                                                               New oligonucleotide libraries comprising oligonucleotides which selectively hybridize to mRNAs transcribed from a transcription a genome, useful for detecting tissue-, pathology-, and developmental-specific genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; mouse; rat; splice transcript; detection; RNA transcript; splice variant; transcriptome; oligonucleotide library; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         detecting RNA transcripts and splice variants of human or animal transcriptemes. The libraries may also be used as specialised mini libraries to detect transcripts of a sub-transcriptome under a particular biological or pathological state, and so allowing the detection of tissue- and pathology-specific genes such as those genes only expressed in specific tissue under a specific pathological condition; to detect developmental specific genes; and to detect RNA transcripts and splice variants of a transcriptome of a patient suffering from a particular disorder. ABN27253 to ABN59589 represent oligonucleotide sequences from rats, humans and mice, which are used in the exemplification of the present invention.

N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                             Crkvenjakov R, Dickson

                                        CC cancerous state of a mammalian cell, comprising detecting at least one Cd differentially expressed gene product in a test sample from a cell csuspected of being cancerous, where the gene product is encoded by one of the 5248 polymucleotide sequences given in AAZ1323 to AAZ1779. The Cplymucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, can be used for raising antibodies for experimental, diagnostic and therapeutic purposes. The polymucleotides for experimental, diagnostic and therapeutic purposes. The polymucleotides may also be used to construct carrays for diagnostics (which may be used to determine function of an CC encoded protein); and to detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to cancer). The polymucleotides of the invention are especially used in the Cd diagnosis, prognesis and management of colorectal cancer, breast cancer, and lung cancer. The polymucleotides can also be used to screen for peptide analogues and antagonists.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, cancer diagnosis and inflammation, leukaemias and c.N.S disorders.

treating hematopoietic r heart and blood vessels

New isolated human uridine kinase family polypeptide 57658, useful treating hematopoietic neoplastic disorders and disorders of neuron

```
Fig
103pp; English.
```

57658 and polynucleotides encoding such proteins. 57658 DNAs and proteins are useful for developing diagnostic and therapeutic agents for 57658—mediated or related disorders such as haematopoietic neoplastic disorders (e.g. leukaemia), haematopoietic disorders (e.g. psoriasis, dermatitis, diabetes mellitus, rheumatoid arthritis, disorders of bone (e.g. rickets, considerations), heart (e.g. sarcoma, myocardial infarction), blood vessels (e.g. hypertension, atheroselerosis) and neurons (e.g. Huntington's disease, Alzheimer's disease, Parkinson's disease). 57658 sequences or their antibodies are useful in screening assays, detection assays (e.g. torognostic assays, and monitoring clinical trials and pharmacogenomics). They are useful as reagents for diagnosing and treating 57658—mediated disorders. 57658 DNAs are useful in gene therapy, in chromosome mapping, to identify an individual from a minute biological sample (tissue typing) and to aid in forensic identification of the biological sample. The discloses human uridine kinase-like polypeptides, designated polynucleotides encoding such proteins. 57658 DNAs\_and\_protein

Sequence 1624 BP; 354 A; 427 C; 506 G; 337 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ş
                   The present invention describes primer sets for synthesising 5602 (C full-length cDNAs defined in the specification. Where a primer set (C comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the colligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises one complementary to the complementary strand of a polynucleotide which comprises a 5'-end complementary to a polynucleotide which comprises as 5'-end complementary to a polynucleotide which comprises as 5'-end complementary to a polynucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence's'-end sequence is selected from those defined in the specification. The primers sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the particularly full-length cDNAs. The primers are also the proteins encoded by the full-length cDNAs. The primers allow obtaining of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assist the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs appresent human cold sequences; AAA93246 to AAH13633 to AAH13633 to AAH13634 represent human amino acid sequences; and AAH13629 to AAH13632 of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  29-JUL-1999; 99JP-0248UJS.
